Has each insurer fixed payment for the 2026 radiation treatment codes?

For each insurer network: how many radiation oncologists its contracts list, and what share of them are still paid legacy (2025) rates for 77402/77407/77412 in the insurer's latest 2026 file, from least to most fixed. Ratings show whether these codes were repriced, not overall payment levels.

38 insurer networks rated: Not fixed 15 · Unclear 10 · Mixed 2 · Updated 11

Not fixed: most oncologists on legacy rates. Unclear: a schedule matching neither the old rates nor the CMS 2026 values. Mixed: no majority. Updated: most on the CMS 2026 relative values, which does not by itself mean payment was restored.

INSURER AND PRODUCT	STATES	RADIATION ONCOLOGISTS	ON LEGACY RATES	UPDATED	OTHER	STATUS	CHANGE SINCE LAST EDITION	PAYMENT PER TREATMENT VS 2025[3]
National carriers								
Aetna · Choice POS II	National	**1,052**	**92%**†	8%	0%	Not fixed	Since Oct: 100% → 92% legacy; 0% → 8% updated	**−47%**

Not rated (not enough usable data in the file): Anthem BCBS Maine; Anthem BCBS New Hampshire; UnitedHealthcare - Sierra Health & Life (NV); Oscar Health (individual plans, FL, NY, TX)

How to read. † = compared with the insurer's own 2025 file: legacy = the contract still prices the three codes with its 2025 relative rates. No † = no usable 2025 file for that network (UnitedHealthcare and Anthem no longer post theirs): legacy = the 2026 rates still follow the pre-2026 fee-schedule pattern. **Radiation oncologists** = individual physicians (NPI with the radiation oncology specialty code) listed under the analyzed contracts, counted once per row; one listed under contracts of different kinds counts as Other. Oncologists appear in several insurers' files, so rows cannot be added. Networks with fewer than 20 analyzable contracts, or resting on a single provider reference, are not rated. "One fee schedule" = every listed group has the same rates, so counts describe providers, not separately negotiated contracts. Blue = Blue Cross Blue Shield plan. [3] Median change in published payment per treatment versus the insurer's own 2025 file (Medicare −16% for the same treatments). [1] 2025 priced from the insurer's own G-code rates. [2] Included under a rule adopted after its results were seen; depends on how 2025 treatments are counted (Harvard Pilgrim Health Care −21% under the alternative convention; Wellmark BCBS shown as the range). * About −19% for practices that billed Cigna with Medicare G-codes in 2025 (720 contracts priced that way). [4] Moda Health: 1 unresolved provider reference (77402) in the insurer's file, disclosed as the analysis plan requires (SAP v1.4 §12).
